DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-37 and 42-60, drawn to a method and an apparatus for creating a binary-coding pattern to be used in binary-coding a multi-value image, classified in class 382, subclass 237.
 - II. Claims 38-41, drawn to a subject matter having a series of halftone dots arranged in a network fashion, classified in class 358, subclass 3.03.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Invention I is drawn to a method and an apparatus for creating a binary-coding pattern to be used in binary-coding a multi-value image. The subcombination has separate utility such as Invention II is directed to a subject matter having a series of halftone dots arranged in a network fashion.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their different classification and recognized divergent subject matter, and required the different field of search for each of these inventions, restriction for examination purposes as indicated is proper.

Art Unit: 2621

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
